(57) Abstract :
 Embodiments of present disclosure relate to a system 100 of an automated shoe cabinet with an augmented reality mirror. The system 100 may include a housing 102 having a plurality of drawers 104 configured to receive a set of boxes 106 that store a pair of shoes. Additionally, the system 100 includes an image acquisition unit to obtain images of each drawers 104, and a display unit to display information, when activated, and displays a reflected image of a user when deactivated. The proposed system enables the user to check whether the pair of shoes are matching with garment worn by the user using augmented reality, without wearing the shoes. The user may selects any pair of shoes from the display unit 110, and corresponding box 106 storing the pair of shoes can be disinfected and moved forward to enable the user to access the pair of shoes.
