(57) Abstract:

The present disclosure relates to a system and method to achieve food traceability via a distributed ledger. The method includes receiving information representative of food from a source location, from one or more authorised entities. The method also includes storing the received information in a structured format on the decentralised platform. The method also includes enabling an interaction between one or more users on the decentralised platform, wherein the interaction is associated to at least one of information exchange, modification of information, view the information, track the food from the source location until a destination location, or a combination thereof. The method also includes updating the information at every stage or at every pre-defined time interval, by the corresponding one or more authorised entities. The method further includes updating the information at every stage or at every pre-defined time interval, by the corresponding one or more authorised entities.
