(57) Abstract :

The present disclosure relates to a system and method to create a website via a distributed ledger. The method includes enabling a user to register on the distributed ledger upon providing user details. The method also includes receiving one or more inputs from the user, upon enabling the user to access a plurality of product features, a plurality of product applications, or a combination thereof. The method further includes computing the one or more inputs into a file to store in a form of a block on the distributed ledger. The method also includes transferring the file through a peer-to-peer network by employing an optimal path-finding technique, for creating the website via the distributed ledger.
