(57) Abstract :

The present disclosure relates to a system 102 for automatically scanning for WordPress vulnerabilities in a WordPress website. The system 102 can be configured to perform scanning tests in the WordPress website and identify security flaws in the WordPress website based on the scanning tests by a scanning module 210. The system 102 is further configured to generate a report of the identified security flaws in the WordPress website to the user by a report module 210. Next, the system 102 is configured to recommend modifications in the WordPress website configuration based on the identified security flaws in the generated report by a recommendation module 214. Furthermore, the system 102 is configured to transmit an alert signal to the user based on the generated report of the security flaws in the WordPress website by an alert module 216.
