(57) Abstract :

The present invention discloses a system (100) for collecting forensic evidence. The system includes a client device (102) deployed on one or more target devices (104) to acquire a plurality of forensic evidence and a forensic device (106) communicatively coupled to the client device through a network (112). Additionally, the system includes a processor (108) configured to receive information of the target devices (104) and transmit one or more instructions to the client device corresponding to the received information. These instructions includes one or more methods to be applied to acquire the forensic evidence from the target devices, which are collected by the client device and transmitted to the forensic device (106). This system provides an efficient and comprehensive way of collecting forensic evidence for investigative purposes.
