(57) Abstract :

The present disclosure relates to a system (100) and method for booking online slots for vaccination. It can be done through any personal communication device (106) of the user (108). It facilitates an easy and convenient way for the user to book a vaccination slot for all doses of the vaccine. It consists of a network (104) that can be used to connect various users (108) at once. It consists of a process (202), a memory (204), and an interface (206) that execute a set of instructions to book vaccination slots for the user (108). The system (100) enables authentication measures to confirm the identity of the user (108) so that he can securely transfer all his personal and confidential data into the system (100). It also uses advanced AI techniques to avoid over-booking of any slots and to enable organizations to book mass slots for all their employees. It overcomes the drawback of having to physically visit a clinic for a vaccination slot booking.
