(57) Abstract :

The purpose of the invention is to implement a Block chain based solution for food delivery system. The proposed invention is a decentralized food distribution system wherein way of providing food that operates without the need for middlemen or a centralized authority is disclosed. In a decentralized food delivery system, transactions are safely recorded on a block chain, providing customers more control over their data and privacy and enabling them to track the status of their order in real-time. Decentralized food delivery systems frequently use smart contracts to automate order submission, payment processing, and delivery, giving both customers and food delivery operators a more effective and streamlined experience. This kind of solution gives clients a more effective, safe, and transparent food delivery experience by utilizing decentralized technologies like block chain, peer-to-peer networks, and smart contracts.
