(57) Abstract :

A system and a method for preventing cheating in an exam hall is provided. The system includes a face recognition device (102), a fingerprint scanning device (104), one or more sensors (106) and a control unit (108). The system 100 significantly improves the integrity of the examination process. The system 100 restrict entry of an unauthorized individual determined by the face recognition device (102) and the fingerprint scanning device (104), and transmit alert signals to exam administrators and security personnel in case of any suspicious behavior or activity of the individual detected by the one or more sensors (106). The system 100 allows to accurately identify cheating behavior, such as copying answers from other students' papers or using electronic devices to access unauthorized materials during the exam.
