(57) Abstract:

The present disclosure relates to a system (100) and a method (300) for securing online financial transactions on a computing device (112). The system receives a set of biometric data and a set of identification code from one or more users (114) through one or more computing devices (112) and stores the received set of biometric data and the set of identification code in a server (110). Additionally, the system can encrypt the received set of biometric data and the set of identification code using one or more encryption algorithms and secure the encrypted set of data through a Secure Socket Layer (SSL) protocol and a Transport Layer Security (TSL) protocol.
