(57) Abstract :
The present disclosure relates to a system and method to verify a user's skill using a distributed ledger. The method includes registering a plurality of users on the distributed ledger, upon providing user details associated with the skill of the user. The method also includes generating a unique identification code for each of the corresponding plurality of users, upon registering on the distributed ledger. The method also includes verifying the corresponding user details provided by each of the plurality of users, using a verification process. The method further includes generating a verified badge for the corresponding plurality of users upon receiving a positive verification result. The method also includes enabling the plurality of users to publish the user details along with the verified badge on an employee page. The method further includes initiating the verification process of the user details in real time, upon receiving a verification command.
