(57) Abstract :

The present disclosure relates to a system (100) and method (300) that includes a processor (102) and memory (104) that execute a set of instructions to streamline user activity on reddit. The system receives an input data from one or more users (114) through one or more computing devices (112) and gathers the received input data from the one or more users (114) on a server (110). Additionally, the system analyzes the received input data from the one or more users (114) to perform a scheduled action, generates an output data upon performance of the scheduled action on analyzation of the received input data and configures the generated output data based on preference of the one or more users (114). The processor (102) also displays the configured output data to the one or more users (114) through the one or more computing devices (112).
