(57) Abstract :

The present disclosure relates to a system (100) and method (300) that includes a processor (102) and memory (104) that execute a set of instructions to secure a stock trading platform. The system receives a set of data from one or more users (114) through one or more computing devices (112) and initializes the received set of data from the one or more users (114) to enable selection of a stock. Additionally, the system secure the received set of data using one or more cryptographic algorithms and commences a transaction between the one or more users (114) and the trading platform upon securing of the received set of data.
