(57) Abstract :

The present disclosure relates to a system (100) and method for recording contents of a screen or an audio depending on the settings chosen by a user. The user can choose the mode of recording and record a screen for a require amount of time. The system (100) captures the contents along with an audio of the suer based on the settings and saves the file in an encoded format that can be easily accessed and played by the user. The user can perform any other post-processing settings such as trimming, adding of margins, overlays or any other standard effects. The system (100) can also record large number of film videos consisting of a substantive amount of data and store it in the memory of the device. The method includes generating multiple tutorials on how to capture contents of a screen depending on the problem posted by the user.
