(57) Abstract:

The present invention relates to a trolley (100) for managing return of books in a library. The trolley (100) includes a compartment (102) with a tray (104) for receiving one or more books returned by an entity, and a glass shield (106) to cover the compartment. The trolley is also equipped with a frame (110) with wheels (114) for easy movement, an RFID reader (122) to read tags on the books, and one or more UV lights (124) to disinfect the received books in the compartment (102). Additionally, the trolley (100) includes a control unit (118) that updates status of the books on a server and transmit a notification to the entity upon successful return of the books and alerts librarians when the compartment is full.
