(57) Abstract :
Embodiments of the present disclosure provide a system (100) and method (200) for sharing security-related data among organizations to respond to security threats. In an aspect, the present disclosure provides a method (200) of for sharing security-related data among organizations to respond to security threats. The method (200) begins with receiving (202), by a processor (102), the security-related data from the plurality of organizations. Next, the method (200) provides (204), by the processor (102), a scalable security information sharing platform to share the security-related data among the plurality of organizations. Thereafter, the method (200) analyses (206), by the processor (102), the shared security-related data to identify anomalous patterns. In the end, the method (200) generates (208), by the processor (102), a report based on the anomalous patterns in the shared security-related data.
