(57) Abstract :

An oral cleaning device (100) includes a handle (102), a plurality of cleaning elements (150), and a fluid dispensing mechanism (150). The handle (102) includes an annular cavity (106) opening at the first end and extending along at least a portion of a length of the handle (102), and the annular cavity is (106) adapted for storage of cleaning fluid. The plurality of cleaning elements (150) is adapted to be removably coupled with the first end of handle (102) and configured for cleaning oral cavity of a user. The plurality of cleaning elements (150) is fluidically coupled to the annular cavity (106). The fluid dispensing mechanism (108) is configured to dispense a predefined quantity of cleaning fluid to the plurality of cleaning elements (150) through the first end of handle (102). Further, the fluid dispensing mechanism 108 includes an actuator to actuate the fluid dispensing mechanism.
