(57) Abstract :

Embodiments of the present disclosure relates to a system (100) and method (300) for training a user against phishing attacks by providing a simulated phishing environment. The system comprises a processor (202) coupled to a memory (204). The memory (204) stores processor-executable instructions. The processor (202) is configured to simulate a phishing attack environment. Further, the processor (202) is configured to train the user to respond to phishing attacks in the simulated environment. In the end, the processor (202) is configured to generate a report for the user based on the training.
