(57) Abstract:

The present disclosure relates generally to mobile device internet access. More specifically the present invention relates to a native application hotspot system for mobile devices. The system (100) includes a native application hotspot device (102), one or more mobile devices (104) with an operating system (106) and a hotspot (108). The native application hotspot device (102) is designed to be transparent to a user. Further the present invention relates to a method for allowing native applications on a mobile device to connect to a hotspot. Advantageously, the present invention relates to a technology that allows native applications on a mobile device to seamlessly and securely connect to a hotspot and access the internet without requiring a separate login or authentication process
