(57) Abstract :

Embodiments of the present disclosure relates to a system (100) and method (300) for displaying meta-data associated with digital content. The system comprises a processor (202) coupled to a memory (204). The memory (204) stores processor-executable instructions. The processor (202) is configured to receive the meta-data associated with the digital content from a plurality of sources. Further, the processor (202) is configured to process the received meta-data. Next, the processor (202) is configured to generate a visual representation of the processed meta-data. In the end, the processor (202) is configured to display the visual representation of the meta-data in a display device.
