(57) Abstract :

The present disclosure relates generally to field of cable management. More specifically the present invention relates to a cable management system. The system (100) includes a locking mechanism (114), a removable outer ring (110) with multiple grooves (112), a plurality of cables and a spool (102). The spool (102) comprises a central hub (104) with multiple spokes (106). The central hub (104) with multiple spokes (106) radiates outwards to create a series of circular rings (108). The removable outer ring (110) is adjusted to accommodate cables of different diameters. Further the present invention relates to a method for working of a cable management system. Additionally, the present invention relates to a cable management spool that is designed to organize and manage a variety of cables, including electrical, Ethernet, and audio cables, among others.
