(57) Abstract :

A shoe cleaning device (100) is provided. The shoe cleaning device (100) involves a housing (102), a shoe rack (104) detachably placed inside the housing (102), a motor (110), and a control unit (112) for effective and spontaneous cleaning of one or more shoe pairs. The shoe cleaning device (100) streamlines the cleaning process, saving valuable time and effort. The shoe rack (104) of the invention is designed to accommodate various shoe sizes and styles. This versatility allows users to clean different types of shoes, from sneakers to formal footwear, without the need for multiple devices or manual adjustments. The proposed invention simplifies and enhances the shoe cleaning process, promoting better shoe maintenance overall. Regular cleaning with the shoe cleaning device (100) not only extends the lifespan of the shoes but also maintains their appearance and freshness, contributing to a well-groomed and professional image.
