(57) Abstract :

The present invention relates to the field of risk management and artificial intelligence more specifically, the system (100) introduces a contextual risk monitoring system (100) and method (300) that leverages advanced technologies, including artificial intelligence, machine learning, natural language processing, and data analytics, to detect and mitigate risks in one or more contexts. A contextual risk monitoring system (100) and method (300) combines advanced technologies to analyze diverse data sources and provide real-time risk detection and mitigation. By integrating data from the one or more sources and contexts, the system (100) offers comprehensive insights, enabling proactive risk mitigation and informed decision-making. Customizable and adaptable, this system (100) and method (300) finds application across industries, addressing early risk identification, cross-context analysis, and strategic resilience enhancement.
