(57) Abstract :  
 An automated cloth stand (100) to provide full cover to clothes is disclosed. The cloth stand includes a rain sensor (104) and a LDR (106) configured to detect the presence of rain, and the intensity of sunlight respectively. Additionally, a driving unit attached to the cloth stand, a shed (114) for covering a plurality of clothes received on the cloth stand, and a control unit (108) configured to analyze changes in meteorological parameters and intensity of the sunlight, correspondingly determine whether to activate the driving unit (112). Upon activation of the driving unit (112), the shed opens over the frame to cover and protects the clothes from rainfall
