(57) Abstract :
 Embodiments of the present disclosure relates to a system (100) and method (300) for monitoring actions of a network of peer-to-peer devices on a Blockchain. The system (102) comprises a processor (202) coupled to a memory (204). The memory (204) stores processor-executable instructions. The processor (202) is configured to monitor record the one or more actions of the network of peer-to-peer devices on the Blockchain. Next, the processor (202) is configured to manage the network of peer-to-peer devices on the Blockchain based on the recorded one or more actions. Thereafter, the processor (202) is configured to analyse the one or more actions of the network of peer-to-peer devices recorded on the Blockchain. In the end, the processor (202) is configured to secure the network of peer-to-peer devices on the Blockchain based on the analysed one or more actions.
