(57) Abstract :

An embodiment of the present disclosure relates to a system (102) and method (200) for efficiently determining the cybersecurity maturity of a network and provides actionable recommendations for improvement of the cybersecurity of the network by determining maturity values of the network. The system (102) comprises a processor (104) coupled to a memory (106). The memory (106) stores processor-executable instructions. The processor (104) is configured to receive data from a plurality of sources. Next, the processor (104) is configured to analyse the received data. Thereafter, the processor (104) is configured to determine maturity values of the analysed data. In the end, the processor (104) is configured to provide recommendations based on the determine maturity values.
