(57) Abstract :

Embodiments of the present disclosure relates to a system (100) and method (300) for augmentation of search queries using glossaries to improve search accuracy and efficiency of search engines. In an aspect, the present disclosure discloses a system (102) for augmentation of search queries using glossaries to improve search accuracy and efficiency of search engines. The system (102) comprises a processor (202) coupled to a memory (204). The memory (204) stores processor-executable instructions. The processor (202) is configured to receive a search query from a user. Further, the processor (202) is configured to analyse the search query. Next, the processor (202) is configured to retrieve documents from a glossary repository based on the analysed search query. In the end, the processor (202) is configured to transmit an augmented search result to the user based on the retrieved documents.
