(57) Abstract :

The present disclosure relates to an adjustable footstep assembly (100) for a chair, where the assembly include a cylinder rotatably configured on a first front leg of the chair, where a footstep panel, when operational, is permanently coupled at one end of the cylinder. Additionally, a column configured on a second front leg of the chair, where the footstep panel comprises of grooves that engage with slots carved on the column at a desired height; and a clamp configured on a hind leg of the chair behind the cylinder such that the panel, when non-operational, retracts and attaches itself to the clamp.
