(57) Abstract :

ABSTRACT METHOD AND SYSTEM FOR INDEXING RISK FACTORS FOR WEB APPLICATION The present disclosure discloses a method (100) for indexing the risk factor of a web application, comprising evaluating the application code for standard checking method, partitioning data into various categories based on causes of attacks, determining the attack method and the number of attempts required for a web application breach, assessing the consequences of the attack and assigning a risk value based on predefined scores, calculating a Risk Index Number (RIN) by summing up the scores obtained from the evaluation, partitioning, determination of attack method and assessing consequences.
