(57) Abstract :
 Present invention discloses a gesture control device, and method thereof. The device includes a hand cover configured to enable user interaction with a computing device through one or more gestures performed using the one or more finger parts. A control unit is operatively coupled to the hand cover and a power source. The power source supplies power to the hand cover. The device includes a first set of sensors and a second set of sensors operatively coupled to the control unit and configured to enable the operations in the computing device by the finger parts. The device is configured to perform plurality of operations in the computing device by controlling a pointer on the screen of the computing device by the one or more gestures generated by the user employing the controlled movement of the one or more finger parts without reach limit for functionality.
