(57) Abstract :
ABSTRACT A natural anti-fungal cream is formulated with a blend of herbal ingredients such as neem extract, clove oil, ginger extract, eucalyptus oil, turmeric powder, and garlic extract, combined with a natural cream base free from synthetic preservatives. This topical formulation offers effective fungal control and provides natural skin benefits. The cream is designed for easy application and absorption, and is packaged in UV-resistant containers to prevent degradation. It demonstrates significant antifungal activity against pathogens like Candida albicans, Aspergillus niger, and Trichophyton rubrum, reducing symptoms such as redness, scaling, and itching. Suitable for health-conscious consumers, it minimizes the risk of side effects associated with synthetic chemicals and is recommended for twice-daily application over a period of at least two weeks.
