(57) Abstract :

The present disclosure introduces a multipurpose wireless neck and head massager 100 designed to provide multifunctional therapy for cervical spondylosis, neck pain, and related discomfort. It features massage nodes 102 to deliver accu-pressure therapy and kneading motions, and container 104 integrated with small pipes 106 to dispense oil or shampoo evenly. A vibration module 108 powers the massage nodes to enable muscle relaxation, controlled via a control panel 110 that manages operational modes. The device incorporates an audio system 112 to play calming music or guided meditation. Moveable arms 114 ensure proper contact with the user's neck or head, while a rechargeable battery 116 provides wireless portability. A water-resistant housing 118 protects internal components during use, particularly in shampooing mode. Additionally, mode selection system 120 enables seamless switching between massage, oiling, and shampooing functionalities, offering a comprehensive system for user well-being. Reference Fig 1
