(57) Abstract :
 A portable laptop stand is comprising, a hollow heat absorbing slab 101 is filled with water/heat-conduction fluid to enable effective absorption and transfer of heat generated during laptop usage, a circular beverage cup holder 102 is integrated with the heat absorbing slab 101 to utilize the transferred heat for warming a beverage, the hollow heat absorbing slab 101 is made detachable for ease of maintenance and fluid replacement, the water/heat-conduction fluid is circulated to the rim of the integrated beverage cup holder 102 by capillary action for even heat distribution, a clamp 103 is adapted with the stand to hold the adapter of the laptop securely to dissipate heat generated by the adapter of the laptop during operation, the beverage cup holder 102 is positioned at a distance from the heat absorbing slab 101 to control heat exposure.
